

Front End Module/App Web-Based Software Suite

- A web based suite for holding minor web based applications for an array of business-oriented processes.
- Our web-based software suite will be a login based web suite that is branded specifically to your business. It will hold all of the custom development tools that we've created for your business in a container style for easy readability and accessibility. Along with this will also be management tools to see specific site usage metrics along with access control to each custom tool.

Personas

Bill the Engineer

- Wants quick access to dimensions of parts in stock
